3D IS ALL THE RAGE!

3D printing technology is fast becoming common practise the world over. Introducing the BEGO Varseo - The 3D print system with an innovative cartridge system developed specially for dental applications. With Varseo, BEGO offers an in-house developed 3D printing system perfectly tailored to dental applications for the production of a diverse range of solutions in the laboratory. In addition to the printer, the associated materials, software tools and services for the rapid, simple and cost-effective production of splints, surgical guides, impression trays and partial denture frames. Offering unique precision and high building speed – regardless of the number of elements to be produced. The optically opaque housing reduces material ageing to a minimum, thus keeping material consumption at a low level, and the user-friendly display provides information on all parameters and gives quick and easy access to all important functions.

GET UP CLOSE & PERSONAL

A microscope benefits every procedure by helping you to better examine and diagnose. Clear magnified images provide details that are difficult to see even with loupes. Carefully chosen to be included in our product range, this microscope's affordability and quality has received excellent feedback. Magnification of 10X (*Also available without the light).

(Order code: OPT-DMF10)

TRIM LIKE YOU MEAN IT

261	351	79	77

023	060	045	040
0175.023HP	5275.060HP	5775.045HP	7775.040HP
194 176 023	263 176 060	194 176 045	237 176 040

Designed for trimming soft acrylics and soft relinings, these traverse section tungsten carbide cutters will give you the quality and assurance Edenta products provide in your laboratory.

CREATE TABS OF YOUR CUSTOM PORCELAIN BLENDS

This precision tool allows you to produce porcelain tabs of a determined thickness from your personal blends in a very simple and professional way. It is also extremely useful as well for porcelain firing tests. The porcelain portionners allow you to take the exact volume of ceramic powder out of the bottle. They are a need for all precise measuring. Portions taken are of 50, 25, 5 and 1 (mm³) depending on the instrument end chosen. Complete kit, includes: sampler, portioners 50-25 and 5-1, and indexing tablet.

EXAKTLY WHAT YOU WANT

Exakto-Form model resin from Bredent gives you accurate reproduction and maximum edge stability. Simply stir each component in their respective tins, pour one into the other, then pour into the mould, and remove after 30 minutes. Final hardness is achieved after 90 minutes. Then saw, trim, or drill as required. The stability of the material avoids dimensional changes and guarantees precise models. Contains six tins of light-ivory resin, and six 50g tins of Hardening agent. Other colours also available.

(Order code: BR52000282)

COUNT ON MAKING THE RIGHT FIRST IMPRESSION

Accutrays Disposable Impression Trays are made from high quality ABS polymers to ensure high dimensional stability. Designed for superior retention and available in partials, small, medium, large and partials. Economically packaged in quantities of 12.

(Order codes: AIAT-)

DISPOSABLE WHITE MIRRORS

With tightening health regulations, it can be difficult keeping up with today's standards. Using these disposable mirrors might just be the solution you're looking for. Designed with an easy grip handle, these mirrors have a safe glass-free plastic disposable mirror which is excellent for adults and kids alike.

Available in boxes of 100, this could be the economic alternative for your business. (Order code: CAR5075)

LIGHT CURING TRAYS

Huge Dental's Light Curing Trays are easy to mould and light cure. It's suitable for individual trays and temporary base-plates. They are ready-to-use, easily handled, and fit upper and lower jaws. Curable in all typical polymerization devices: UVA/VIS blended light/stroboscope (wavelength of 420-480 NM) or UV (wavelength of 350-400NM). Even thickness, no pungent odour, easy to form, easy to adapt and trim, with excellent dimensional stability. Packaged in 50 piece containers.

(Order code: HU-LCTRAY)

GINGIVAL MASK PERFECTION

Reproduce gingival tissue with accuracy with Bredent's Multisil. Quick and economical processing with the trouble-free direct applicator into the impression or the matrix. The natural colour of the gingival mask supports perfect shade determination of the veneer. Available in both soft and hard resin.

(Order codes: Soft - BR54001047, Hard - BR54001133)

SUPER VARIOLAND

Bredent's Vario-Kugel-Snap product range is highly functional and secure in their application. Providing patients with secure dentures and the quality you've come to expect with Bredent products.
